'A safe and inclusive community deeply rooted in God's love' leading to 'life in all its fullness'

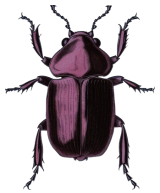
Meridian Angel: Summer Term 1, Year 6

In this unit, pupils will explore the properties of shape, focusing on angles, triangles, quadrilaterals and polygons. They will learn how to measure, classify and calculate angles, including finding missing angles using known rules such as angles on a straight line and within shapes. Pupils will also develop their understanding of circles, nets of 3D shapes and how to draw shapes accurately using mathematical tools. Throughout the unit, children will build confidence in reasoning and problem solving, applying their knowledge to increasingly complex geometric problems.

In our reading and writing lessons, children will explore Beetle Boy by M.G. Leonard. They will deepen their understanding of the text through discussion, prediction and inference. They will develop key reading skills by exploring vocabulary, retrieving information and explaining their ideas with evidence. Alongside this, pupils will learn about different beetle species and gather facts to support their writing. They will then apply their knowledge to write a non-chronological report, focusing on clear organisation, subject-specific vocabulary and accurate sentence construction.

In this local history unit, Year 6 pupils will explore the life of Walter Tull, placing key events in chronological order and understanding how his story connects to both local and national history. They will investigate historical sources to learn about his experiences, including the challenges he faced and the barriers he broke as a footballer and British Army officer. Through this, children will develop their understanding of significance, equality and courage, culminating in a creative project that represents his life and legacy.

This term, Year 6 pupils will take part in a geography enquiry exploring their local area of Edmonton and the nearby Meridian Water development. They will learn how places change over time by carrying out fieldwork, collecting data, and investigating whether the development is sustainable. By the end of the unit, pupils will present their findings and make evidence-based judgements about the impact of this important local project.



In this unit, Year 6 pupils will learn about evolution and inheritance, exploring how living things have changed over time and how characteristics are passed from parents to offspring. They will understand how fossils provide evidence of past life and how animals and plants adapt to their environments in order to survive. Through scientific enquiry, pupils will develop their ability to observe, compare and explain how variation and adaptation support evolution.

Pupils will explore the work of Joseph Cornell, learning how artists use objects, symbolism and composition to express memories and ideas. Throughout the unit, children will experiment, refine and evaluate their work, developing independence and understanding of how art can communicate personal meaning and experience.

In computing, pupils will create a video yearbook to reflect on their primary journey, developing skills in video editing, sequencing and combining media using tools from the Teach Computing curriculum.

Pupils will explore relationships, mental health, and online safety, developing the knowledge and skills needed to build positive, respectful connections with others. The unit culminates in an Internet Safety presentation, where children will apply their understanding to promote safe and responsible use of technology

In PE this term, Year 6 pupils will develop their skills in athletics and cricket, focusing on running, jumping, throwing, striking and fielding techniques. They will build on their ability to apply these skills in competitive situations, working both individually and as part of a team while developing tactics and fair play.Pupils will improve their physical fitness, coordination and resilience, evaluating their performance and striving to achieve their personal best.

Christianity-How has the Christian message survived for over 2000 years?

In this RE unit, Year 6 pupils will explore how the Christian message has survived for over 2000 years, examining key events such as Pentecost, the role of the Bible and the impact of the Church locally and globally. They will develop their understanding of belief, perseverance and interpretation, considering different perspectives and expressing their own views thoughtfully.
